## **BENEFITS OF**

## **PARISO EWI SYSTEMS**

- Systems hold NSAI approval
- All render products produced by PAREX
- Durable, robust and designed to last
- Insurance backed warranties available
- Applied externally, minimising disruption to the occupants
- Prolongs life of buildings, increases value
- Reduces energy consumption and lowers fuel bills
- Deals with cold bridging and eliminates thermal breaks within the structure

• U-Value and interstitial calculations can be provided

- Wide range of finishes and colours
- Vapour permeable
- Excellent weather protection
- Excellent resistance to algae and fungi
- Cuts heat loss, reduces CO<sup>2</sup> emissions
- Meets or exceeds thermal regulations

## **EXTERNAL WALL**

# INSULATION SYSTEMS

### THE SOLUTION FOR WARMER HOMES, LOWER BILLS

Soaring energy costs have brought the need for more effective insulation solutions sharply into focus.

External walls are the key contributor to energy loss accounting for up to 45 per cent of heat loss from domestic properties. These walls are energy inefficient with expensive heat and energy literally disappearing through the walls into thin air!

#### enefits of insulating your walls

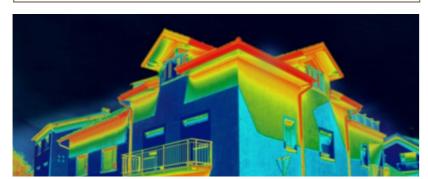

PARISO range of EWI systems footprint of the home by not only to significantly reduce cutting CO<sup>2</sup> emissions. heat loss through the external envelope, but also **upgrade the** PARISO range of EWI systems appearance and appeal of the offer a selection of approved

Think of the PARISO range types and finishes to create EWI systems as wrapping the "new homes" that are efficient, building in a nice warm blanket look good and could also and providing an extra energy- increase property values. In efficient layer of insulation addition to the thermal gain that designed to prevent heat PARISO range of EWI systems loss, create a warmer, more achieve, the ever-present comfortable environment risks of condensation and within the home, a better mould growth are significantly looking exterior and **reduced** reduced. A healthier building

not only means lower bills, but outcomes. also a reduction in the carbon

provide a cost-effective solution reducing energy demand and

insulation materials with a choice of advanced render fabric, much improved living conditions and health benefits Reduced energy consumption are all subsequent positive

# PARISO EWI SYSTEMS

PARISO range EWI systems bring together the company's expertise in developing easy-toapply, advanced renders: Mineral, Dash and Acrylic render finishes display excellent anti-crack properties, are resistant to impact, providing aesthetically-pleasing high performance finishes.

which means they don't need provide the thermal upgrade needed painting and are available in a to meet the new standards. broad choice of hues to match or PARISO EWI render finishes.

our Advanced Masonry System wool.

The finishes are through-coloured to match the original facade and

complement the local vernacular. combined with proven and PARISO Brick Slip systems, provide accredited expanded polystyrene the benefits of using real bricks or (EPS) or non-combustible mineral

#### PARISO EWI WITH **ACRYLIC RENDER** SYSTEM

Available in an extensive range of colours. finishes and textures which can be adapted to meet your expectations and design requirements.

The high performance anticrack base coat technology with superior tensile and flexural capability, provides excellent impact resistance, which is designed to complement the PAREXTHERM acrulic finish. The system is highly adaptable and is also used when lightweight masonry brick effect is required.

#### PARISO EWI SYSTEM **WITH MARBRI DASH RENDER SYSTEM**

A single component product is used as an adhesive, base coat and dash receiver incorporating the PAREX high performance and flexible anti-crack technology.

With speed of application and a wide range of dash finishes to match the local surroundings, you will never be short of options.

#### PARISO EWI SYSTEM WITH MINERAL **RENDER SYSTEM**

A specially formulated mineral based render, with faster setting

Providing a unique opportunity in flexibility of design, the finish retains the traditional appearance of a typical render facade, with the advantage of polymer modified anti-crack technology.

The system is available in a range of 48 standard colours, bespoke colour options and can be finished in a range of textures.

## **INSULATION TYPE**

Our systems can be designed to meet the U-Value demands of the national or local building regulation requirements.

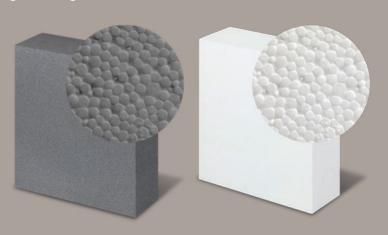

The U-Value is a measure of how quickly heat escapes through a structure to the outside and as a result, how much carbon is leaking

A U-Value is a measurement given to the thermal insulation qualities of a wall, floor or roof, where the lower the figure the better the thermal performance, leading to reduced energy bills, which also helps in reducing the use of precious resources.

Simply put, the thicker the insulation you can add to your building, the better the wall, floor or roof will perform and more energy is saved.

#### **GRAPHITE EXPANDED POLYSTYRENE EPS**

- The primary insulation used in EWI applications
  Ideally suited for bonded only applications
  Highly resistant to moisture, maintaining its thermal
- Detailing can be cut into the insulation. Cills, headers and other feature details can be easily created to replicate the original design and enhance the look of the structure

#### MINERAL WOOL

- Excellent breathability due to the nature of the mineral wool.
  Fire resistant, non-combustible and classified to A1. ideal for multioccupancy building and high rise structures
  Compared to the other insulations, mineral wool can provide better acoustic performance of the wall and may reduce the
- effect of external noise entering the building
