

A cross-sectional diagram of a wall waterproofing system. The diagram shows a concrete wall with aggregate (represented by small triangles) and a vertical reinforcement bar. The waterproofing system consists of several layers: a base layer of SIKAPROOF A on a suitable substrate at the bottom; a vertical layer of SIKAFLEX PRO-3 on the reinforcement bar; a horizontal layer of SIKAPROOF FIXTAPE-50 at the bottom of the wall; and a top layer of SIKAWATERBAR (profile and material to suit movement) at the top of the wall. A filler board (by others) is shown above the SIKAWATERBAR. The entire system is designed to prevent water penetration through the wall and at the base.

The information contained herein and any other website are given in good faith based on Bank's current knowledge and experience of the products under property name, furnished and applied under material specifications in accordance with Bank's current recommendations. The information only applies to the application(s) and product(s) explicitly referred to herein and is based on laboratory tests written on the material product label. It does not change in the performance of the application, such as changes in substrate use, or in case of a different application, without Bank's technical Service team's use in using this product. The information contained herein does not release the user of the products from testing them for the intended application and purpose. All orders are processed subject to the current terms of sale and delivery. Sales must always refer to the most recent issue of the user manual (Bank Group). The product's performance, degree of wear and use, may be different in practice.
