# GEDLING MISSION HALL LONDON

## **SIKA WEATHERPROOFS THE GEDLING MISSION HALL IN LONDON.**

For the new £5m retail and residential development at Gedling Mission Hall, Southwark, a waterproof and airtight seal for the building's external façade was of paramount importance. To achieve an impenetrable seal around the many joints and junctions of the windows and façade, [SikaMembran® Universal](#) was supplied.

Designed by architects Weston Williamson, the building's external façade features alternating horizontal banding of brickwork, glazing and fixed panels – designed to complement existing local architecture.

The [SikaMembran® Universal](#) system provided a weatherproof seal to the outer facade and windows. As well as creating a comfortable and weather tight living and working environment, the system aids in the energy efficiency of the building by minimising loss of heating and cooling by creating a thermally sealed building envelope.

Designed to provide an efficient method of sealing any construction gaps in building façades, the system comprises of [SikaMembran® Universal](#), a versatile EPDM synthetic rubber waterproofing membrane and [SikaBond® TF+N](#), an elastic adhesive. Durable, UV and ozone resistant, it can be bonded to almost any building substrate to provide an airtight, waterproof seal.
