

BUILDING TRUST

PRODUCT DATA SHEET

Sikafloor®-330

Self-smoothing, elastic, low-VOC, polyurethane flooring resin

PRODUCT DESCRIPTION

Sikafloor®-330 is a 2-part, polyurethane, elastic, low-VOC self-smoothing flooring resin. It is part of the Sika Comfortfloor® decorative flooring range.

USES

Sikafloor®-330 installation works to be carried out only by Sika Approved Contractors. Please observe information given by Product Data Sheets.

The Product is used as a:

Elastic self-smoothing wearing layer for Sika ComfortFloor® systems.

Please note:

 The System may only be used for interior applications

CHARACTERISTICS / ADVANTAGES

- Low VOC emissions
- Soft underfoot
- · Comfortable to walk on
- Reduces footfall sound and contact noise
- Remains permanently elastic
- Seamless
- Good mechanical resistance
- Easy to apply
- Low maintenance

ENVIRONMENTAL INFORMATION

- Contributes towards satisfying Materials and Resources (MR) Credit: Building product disclosure and optimization Environmental Product Declarations under LEED® v4
- Contributes towards satisfying Materials and Resources (MR) Credit: Building Product Disclosure and Optimization — Material Ingredients under LEED® v4
- Complies with the requirements of DIBt (June 2004) in combination with the NIK values from AgBB (March 2008) for use in the indoor environment.

APPROVALS / STANDARDS

- CE marking and declaration of performance based on EN 13813:2002 Screed material and floor screeds — Screed material — Properties and requirements — Synthetic resin screed material
- CE marking and declaration of performance based on EN 1504-2:2004 Products and systems for the protection and repair of concrete structures — Surface protection systems for concrete — Coating

PRODUCT INFORMATION

Chemical Base	Polyurethane		
Packaging	Container Part A	15.8 kg	
	Container Part B	4.2 kg	
	Container Part A + Part B	20.0 kg	
	Refer to the current price list for available packaging variations.		
Shelf Life	6 months from date of production		

Product Data Sheet

	Minimum		+15 °C	
Relative Air Humidity	Maximum		80 % r.h.	
Dew Point	be at least +3 °C above dev	Beware of condensation. The substrate and uncured applied product must be at least +3 °C above dew point to reduce the risk of condensation on the surface of the applied product.		
Substrate Temperature	Maximum		+30 °C	
	Minimum		+15 °C	
Substrate Moisture Content	Refer to the individual prin	ner Produc	t Data Sheet.	
Pot Life	<u>+10 °C</u>		21 minutes	
	+20 °C +30 °C		15 minutes	

Waiting Time / Overcoating

Before overcoating the Product, allow:

Temperature	Minimum	Maximum	
+10 °C	24 hours	72 hours	
+20 °C	18 hours	48 hours	
+30 °C	16 hours	36 hours	

Note: Times are approximate and will be affected by changing ambient conditions, particularly temperature and relative humidity.

VALUE BASE

All technical data stated in this Data Sheet are based on laboratory tests. Actual measured data may vary due to circumstances beyond our control.

FURTHER DOCUMENTS

Refer to the following method statements:

- Sika Method Statement Evaluation and preparation of surfaces for flooring systems
- Sika Method Statement Sikafloor® mixing and application

ECOLOGY, HEALTH AND SAFETY

Local safety regulations must be observed and it advisable to wear PPI when working with this product with particular attention paid to cutting and handling. Transportation Class: The product is not classified as hazardous good for transport. Disposal: The material is recyclable. Disposal must be according to local regulations. Please contact your local Sika sales organisation for more information.

Regulation (EC) No 1907/2006 (REACH) - Mandatory training

As from 24 August 2023 adequate training is required before industrial or professional use of this product. For more information and a link to the training visit https://irl.sika.com/en/knowledge-hub-sika-ireland/putraining.html.

APPLICATION INSTRUCTIONS

EQUIPMENT

MIXING EQUIPMENT

Electric double paddle mixer (>700 W, 300 to 400 rpm)

APPLICATION EQUIPMENT

- Pin leveller
- Trowels, including serrated
- Spiked roller

SUBSTRATE QUALITY

IMPORTANT

Incorrect treatment of cracks

The incorrect assessment and treatment of cracks may lead to a reduced service life and reflective cracking. TREATMENT OF JOINTS AND CRACKS

Construction joints and existing static surface cracks in substrate require pre-treating before full layer application. Use Sikadur® or Sikafloor® resins.

SUBSTRATE CONDITION

Cementitious substrates must be structurally sound and of sufficient compressive strength (minimum 25 N/mm^2) with a minimum tensile strength of 1.5 N/mm^2

Substrates must be clean, dry and free of contaminants such as dirt, oil, grease, coatings, laitance, surface treatments and loose friable material.

Maximum slope gradient

Note: Do not apply on substrates with a slope > 1 % gradient.

SUBSTRATE PREPARATION

MECHANICAL SUBSTRATE PREPARATION IMPORTANT

Surface defects due to voids in the substrate

Voids and blow holes in the substrate will weaken the surface and damage the covering Product if not repaired during the preparation process.

- 1. Fully expose blow holes and voids during surface preparation to identify the required repairs.
- 1. Remove weak cementitious substrates.
- 2. Prepare cementitious substrates mechanically using abrasive blast cleaning, abrasive planing or scarifying equipment to remove cement laitance.
- 3. Before applying thin layer resins, remove high spots by grinding.
- Use industrial vacuuming equipment to remove all dust, loose and friable material from the application surface before applying the Product.
- 5. Use products from the Sikafloor®, Sikadur® and Sikagard® range of materials to level the surface or fill cracks, blow holes and voids.

Contact Sika® Technical Services for additional information on products for levelling and repairing defects. SUBSTRATE PREPARATION OF NON-CEMENTITIOUS SUBSTRATES

For information on substrate preparation of non-cementitious substrates, contact Sika® Technical Services

Sikafloor®-330July 2024, Version 06.01
020812040020000017

MIXING

- Mix part A until a uniform colour and mix has been achieved.
- 2. Add Part B (hardener) to Part A.
- IMPORTANT Do not mix excessively. Mix Part A + B continuously for ~3 minutes until a uniformly coloured mix is achieved.
- To ensure thorough mixing, pour materials into another container and mix again to achieve a smooth and uniform mix.
- During the final mixing stage, scrape down the sides and bottom of the mixing container with a flat or straight edge trowel at least once to ensure complete mixing.

APPLICATION

IMPORTANT

Strictly follow installation procedures

Strictly follow installation procedures as defined in Method Statements, application manuals and working instructions which must always be adjusted to the actual site conditions.

IMPORTANT

Protect from moisture

After application, protect the Product from damp, condensation and direct water contact for at least 24 hours.

IMPORTANT

Uncured material reacts with water

Uncured material reacts with water of any kind, which leads to foaming.

1. During the application, wear head and wrist bands to avoid sweat falling onto the uncured material.

IMPORTANT No application on rising moisture

Do not apply on substrates with rising moisture. IMPORTANT

Damaged finish due to heating with fossil fuel heaters Fossil fuel heaters powered by gas, oil or paraffin produce large quantities of both carbon dioxide and water vapour, which may adversely affect the finish.

1. For temporary heating, use only electrically powered warm air blower systems. Do not use gas, oil, paraffin or other fossil fuel heaters.

IMPORTANT

Indentations in resin due to high temperature combined with high point loading

Under certain conditions, underfloor heating or high ambient temperatures combined with high point loading may lead to indentations in the resin.

Exact colour matching

Note: For exact colour matching, ensure the Product in each area is applied from the same control batch number.

SELF-SMOOTHING WEARING LAYER

- 1. Pour the mixed Product onto the substrate. Note The consumption is specified in Application Information.
- Apply the Product evenly over the surface with a serrated trowel.
- 3. To achieve a smooth finish, smooth the surface with the flat side of a trowel.
- 4. Back roll the surface in two directions at right angles with a steel spike roller.

CLEANING OF TOOLS

Clean all tools and application equipment with Sika® Thinner C immediately after use. Hardened material can only be removed mechanically.

LOCAL RESTRICTIONS

Note that as a result of specific local regulations the declared data and recommended uses for this product may vary from country to country. Consult the local Product Data Sheet for the exact product data and uses.

LEGAL NOTES

The information, and, in particular, the recommendations relating to the application and end-use of Sika products, are given in good faith based on Sika's current knowledge and experience of the products when properly stored, handled and applied under normal conditions in accordance with Sika's recommendations. In practice, the differences in materials, substrates and actual site conditions are such that no warranty in respect of merchantability or of fitness for a particular purpose, nor any liability arising out of any legal relationship whatsoever, can be inferred either from this information, or from any written recommendations, or from any other advice offered. The user of the product must test the product's suitability for the intended application and purpose. Sika reserves the right to change the properties of its products. The proprietary rights of third parties must be observed. All orders are accepted subject to our current terms of sale and delivery. Users must always refer to the most recent issue of the local Product Data Sheet for the product concerned, copies of which will be supplied on request.
